

Chapter 880: REGULATION OF CHEMICAL USE IN CHILDREN'S PRODUCTS

SUMMARY: This rule sets forth the process by which the Board of Environmental Protection may designate a chemical for regulatory scrutiny as authorized under Title 38, chapter 16-D, §§1691-1699-B of the Maine Revised Statutes.

- 1. Definitions.** The following terms, as used in this rule, have the following meanings:
 - A. Alternative.** “Alternative” means a substitute process, product, material, chemical, strategy or combination of these that serves a functionally equivalent purpose to a chemical in a children’s product.
 - B. Board.** “Board” means the Board of Environmental Protection.
 - C. CFR.** “CFR” means the Code of Federal Regulations.
 - D. Chemical.** “Chemical” means a substance with a distinct molecular composition or a group of structurally related substances and includes the breakdown products of the substance or substances that form through decomposition, degradation or metabolism.
 - E. Chemical of high concern.** “Chemical of high concern” means a chemical on the list of chemicals published by the department as required under 38 MRS §1693.

NOTE: 38 MRS §1693 requires the department to publish a list of chemicals of high concern in concurrence with the Maine CDC. To view the current list, go to <http://www.maine.gov/dep/oc/safechem/index.htm>.

- F. Children’s product.** “Children’s product” means a consumer product intended for use by children, such as baby products, toys, car seats, personal care products and clothing, and any consumer product containing a chemical of high concern that when used or disposed of will likely result in a child’s or a fetus’s being exposed to that chemical.
- G. CMR.** “CMR” means the Code of Maine Rules.
- H. Commissioner.** “Commissioner” means the Commissioner of the Department of Environmental Protection.
- I. Consumer product.** “Consumer product” means any item sold for residential or commercial use, including any component parts and packaging. “Consumer product” does not include a food or beverage or an additive to a food or beverage, a tobacco product or paper or forest products or a pesticide regulated by the federal Environmental Protection Agency. “Consumer product” also does not include a drug or biologic regulated by the federal Food and Drug Administration or the packaging of a drug or biologic regulated by the federal Food and Drug Administration if the packaging is regulated by the federal Food and Drug Administration.
- J. Department.** “Department” means the Department of Environmental Protection, which includes both the Board and the Commissioner.

- K. Distributor.** “Distributor” means a person who sells consumer products to retail establishments on a wholesale basis.
- L. Green Screen.** “Green Screen” means the chemical screening method called Green Screen for Safer Chemicals, Version 1.0, published by Clean Production Action in March 2007.
- M. Intentionally-added.** “Intentionally-added” in reference to a priority chemical means a chemical that was added during the manufacture of the product or product component to provide a specific characteristic, appearance or quality or to perform a specific function.
- N. Maine CDC.** “Maine CDC” means the Maine Center for Disease Control and Prevention within the Department of Health and Human Services.
- O. Manufacturer.** “Manufacturer” means any person who manufactured a final consumer product or whose brand name is affixed to the consumer product. In the case of a consumer product that was imported into the United States, “manufacturer” includes the importer or first domestic distributor of the consumer product if the person who manufactured or assembled the consumer product or whose brand name is affixed to the consumer product does not have a presence in the United States.
- P. MRS.** “MRS” means the Maine Revised Statutes.
- Q. Novelty.** “Novelty” means a product intended mainly for personal or household enjoyment or adornment. Novelty items include, but are not limited to, items intended for use as practical jokes, figurines, knickknacks, toys, games, cards, ornaments, yard statues and figures, candles, jewelry and holiday decorations.
- R. Priority chemical.** “Priority chemical” means a chemical identified as such by the board pursuant to section 2 of this rule.

2. Designation of priority chemicals

- A. Purpose of designation.** This section authorizes the board to designate one or more chemicals of high concern as a priority chemical. The designation of a priority chemical serves one or more of the following purposes:
- (1) To facilitate the gathering of information on the use of the chemical in children’s products and the extent to which children may be exposed to the chemical as a result of that usage;
 - (2) To facilitate the gathering of information on the safety and availability of alternatives to use of the chemical in children’s products; and
 - (3) To facilitate the consideration of a ban on the sale of children’s products to which the priority chemical has been intentionally added when safer alternatives are available.

The designation of a priority chemical does not constitute a determination by the board that the designated chemical poses a greater risk to children than other chemicals on the

list of chemicals of high concern. The board may designate any chemical on the list of chemicals of concern as a priority if at least one the criteria under paragraph B(2) is met.

B. Prerequisites for designation. The board may designate a priority chemical if the board finds, in concurrence with the Maine CDC, that:

- (1) The chemical appears is on the list of chemicals of high concern published by the department pursuant to 38 MRS §1693; and

NOTE: The list of chemicals of high concern can be viewed at <http://www.maine.gov/dep/oc/safechem/index.htm>. Under 38 MRS §1693, the department may include a chemical on the list only if has been identified by an authoritative governmental entity on the basis of credible scientific evidence as: 1) a carcinogen, a reproductive or developmental toxicant or an endocrine disruptor; 2) persistent, bioaccumulative and toxic; or 3) very persistent and very bioaccumulative. For the purposes of designating a priority chemical, the board presumes that a chemical on the list of chemical of high concerns exhibits one or more these traits. The board will not revisit the scientific evidence that led the chemical to be listed as such.

- (2) One or more of the following criteria are met:

- (a) The chemical has been found through biomonitoring to be present in human blood, including umbilical cord blood, breast milk, urine or other bodily tissues or fluids;
- (b) The chemical has been found through sampling and analysis to be present in household dust, indoor air, drinking water or elsewhere in the home environment;
- (c) The chemical has been found through monitoring to be present in fish, wildlife or the natural environment;
- (d) The chemical is present in a consumer product used or present in the home;
- (e) The chemical has been identified as a high production volume chemical by the federal Environmental Protection Agency; or
- (f) The sale or use of the chemical or a product containing the chemical has been banned in another state within the United States.

C. Scope of review. The board recognizes that scores of chemicals on the list of chemicals of high concern are likely to meet the prerequisites for designation as priority chemicals. The board further recognizes that the resources available to the department to investigate priority chemicals are limited. When determining whether to designate a priority chemical, the board shall consider all available and relevant evidence related to the need for and appropriateness of regulatory action by the State including but not limited to:

- (1) The need for additional information on the use of the chemical in children's product;

- (2) The extent to which the chemical is used in children's products and the likelihood that children will be exposed to the chemical as a result of its presence in children's products;
- (3) The need for information on the availability and safety of alternatives to the chemical;
- (4) Whether regulatory action is necessary and appropriate in light of actions taken or underway with respect to the chemical in other states and jurisdictions; and
- (5) Whether the department and Maine CDC have adequate financial and human resources to accomplish the tasks associated with designation of the priority chemical.

D. Designation by rule required. When designating a priority chemical, the board shall do so by adoption of a routine technical rule in accordance with the rulemaking requirements of the Maine Administrative Procedures Act, 5 MRSA §§8001 through 8064. The rule, or the basis statement to the rule, must:

NOTE: The term "basis statement" as used in this subsection refers to the written statement explaining the factual and policy basis for the rule. The Maine Administrative Procedures Act requires state agencies to adopt such a statement at the time of adoption of any rule. See 5 MRS §8052(5).

- (1) Identify the chemical and confirm its presence on the list of chemicals of high concern published by the department;
- (2) Specify which of the criteria under section 2(B)(2) are met;
- (3) Include findings of fact sufficient to apprise the chemical manufacturer, the chemical user and any interested member of the public of the basis for the board's decision to designate the chemical as a priority chemical; and
- (4) Specify the information that must be submitted by manufacturers and distributors of children's product that contain the chemical, the basis for requesting the information and the deadline for submission. The board may not specify a deadline that is sooner than 180 calendar days after the effective date of the rule.

NOTE: This rule seeks to minimize the burden of disclosure on product manufacturers and distributors by: i) requiring the board to state with specificity the information it seeks from manufacturers and distributors; and ii) authorizing the board in section 3(C) below to waive the submission of chemical use information that otherwise would be required under the law [see 38 MRS §1695(1)] if the board determines that the information is not needed. The board recognizes that it is unlikely to need the same type and range of information for each priority chemical and therefore intends, by this rule, to enable the scope of the required disclosure to be determined on a chemical by chemical basis.

- 3. Disclosure of information on priority chemicals.** The manufacturer or distributor of a children's product for sale in the State that contains an intentionally-added priority chemical shall submit the information specified by the board in the rule designating the priority chemical and any additional information requested by the commissioner pursuant to

subsection C below. The information must be submitted to the department by the deadline specified in the rule. Submissions may be made by regular or electronic mail.

A. Information on chemical use. The information to be disclosed shall include the following information on chemical use unless waived by the board in the rule designating the priority chemical:

- (1) A description of the product or products containing the priority chemical;
- (2) The number of product units sold or distributed for sale in the State or nationally;
- (3) The amount of the chemical in each unit of the product; and
- (4) The function of the chemical in the product.

The board may waive submission of all or part of the information required under paragraphs (1) through (4) if the board determines that substantially equivalent information already is publicly available, the specified use is minor in volume or the information otherwise is not needed.

B. Supplemental information. The information to be disclosed shall also include the following supplemental information if specified by the board in the rule designating the priority chemical or by the commissioner as authorized under subsection D below:

- (1) Information on the propensity for the chemical to be released from the product during use, the likelihood of child exposure to the chemical as a result of its use, the pathways (e.g. inhalation, ingestion) by which exposure could occur and the predicted magnitude of the exposure;
- (2) Information on the extent to which the chemical is present in the environment and humans; and
- (3) An assessment of the availability, cost, feasibility and performance, including potential for harm to human health and the environment, of alternatives to the priority chemical and the reason the priority chemical is used in the manufacture of the children's product in lieu of identified alternatives. If an assessment acceptable to the department is not timely submitted, the department may assess fees as provided under 06-096 CMR 881 to cover the cost of preparing an independent assessment. An acceptable assessment is one that:
 - (a) Describes the function of the priority chemical in the product and list the specific characteristics of the chemical (e.g., physical or chemical properties; price; availability) that led to its selection to fulfill that function;
 - (b) Identifies the specific chemical and non-chemical alternatives considered in lieu of the priority chemical, and describes why the priority chemical was selected over each identified alternatives;

- (c) Identifies and describes any known emerging chemical and non-chemical alternatives to use of the priority chemical in the product and, for each such alternative, provides the following information:
 - (i) The status of research and development;
 - (ii) The current barriers to introduction of the alternative into the marketplace;
 - (iii) The projected timeframe for introduction of the alternative into the marketplace; and
 - (iv) The advantages and disadvantages of using the alternative in lieu of the priority chemical, assuming the alternative is successfully introduced into the marketplace;
- (d) Identifies the key, distinguishing human health and environmental hazards (or “endpoints”) associated with the priority chemical, as identified in consultation with the department and the Maine CDC;
- (e) Evaluates the human health and environmental hazard posed by the priority chemical and each identified chemical alternative using the Green Screen or other evaluation methodology approved by the department in consultation with the Maine CDC; and
- (f) Lists and provides copies of all peer-reviewed studies or government-generated studies identified through a search of publicly accessible databases using search terms agreed on by the department in consultation with the Maine CDC. The search must be conducted for the priority chemical and for each chemical alternative identified pursuant to subparagraph (b) and (c) and must, at a minimum, include as search terms the endpoints identified pursuant to subparagraph (d).

C. Extension of submission deadline; waiver of disclosure by the commissioner. The commissioner may extend the deadline established by rule for submission of information on children’s products that contain a priority chemical if the commissioner determines that more time is needed to comply with the request or the information is not needed by the original deadline. The commissioner also may waive submission of all or part of the information required in the rule designating the priority chemical if the commissioner subsequently determines that substantially equivalent information already is publicly available, the specified use is minor in volume as demonstrated by the total number of products units sold in Maine during the 3 most recent calendar years or the information otherwise is not needed.

D. Commissioner authority to request additional information. Upon review of information submitted pursuant to a board rule designating a priority chemical, the commissioner may request the manufacturer or distributor of a children’s product to clarify the submittal, to supplement incomplete information or to provide additional information not specified in the rule if the commissioner determines that the information is needed for the department to complete its evaluation of the priority chemical.

Within 30 days after making a request for additional information under this subsection, the commissioner shall:

1. Arrange for notice of the request to be published in the *Bangor Daily News*, *Kennebec Journal*, *Portland Press Herald*, *Lewiston Sun-Journal* and *Central Maine Morning Sentinel*; and
2. Mail notice to any trade group, professional association, interest group or other person who either has notified the commissioner of their interest in the matter or, in the opinion of the commissioner, is likely to be interested.

The notice must identify the products covered by the request and must include directions on how manufacturers and distributors of children's products that contain the priority chemical or other interested persons may submit information related to the request for consideration by the department. The deadline for receipt of information may be no sooner than 30 days after the notice is published.

E. Compliance options; minimizing duplicative submissions. A manufacturer or distributor fulfills its obligation under this section when it:

1. Submits the required information;
2. Relies on information submitted on behalf of the manufacturer or distributor by a trade association, chemical manufacturer or other third party provided the information is presented in a form acceptable to the commissioner; or
3. Obtains approval from the commissioner to rely on information submitted by another person.

To the extent practical and appropriate, the commissioner shall establish procedures to minimize the submission of duplicative information and shall develop, as appropriate, procedures for the equitable sharing of the costs of compiling the information and conducting assessments of alternatives.

F. Data protection. Chemical use information of the type listed in subsection A above is a public record as provided by Title 1, chapter 13, subchapter 1 [1 MRS § 401 et seq.], and may be made public upon submission to the department without further notice to the submitter. All other information submitted to the department pursuant to this chapter must be segregated from the public records of the department in accordance 38 MRS §1310-B, subsection 2, if the person submitting the information designates the information as confidential.

This subsection does not authorize a manufacturer or distributor to refuse to disclose to the department information required under this chapter.

NOTE: The requirement to disclose information on the use of and exposure to priority chemicals in children's products is fundamental to the effective study and control of those chemicals, and is a key feature of the law on Toxic Chemicals in Children's Products. The public release of chemical use information submitted to the department pursuant to this

requirement furthers the purpose of the law by providing consumers with more complete information the products available to them and encourages the development of safer alternatives. By this rule, the board seeks to give the department the discretion it needs to make such information public without disclosing industry trade secrets. A trade secret is defined under 10 MRS §1542(4) as follows:

"Trade secret" means information, including, but not limited to, a formula, pattern, compilation, program, device, method, technique or process, that: i) derives independent economic value, actual or potential, from not being generally known to and not being readily ascertainable by proper means by other persons who can obtain economic value from its disclosure or use; and ii) is the subject of efforts that are reasonable under the circumstances to maintain its secrecy.

4. Authority to ban the sale of products containing a priority chemical.

A. Prerequisites for a ban. The board may adopt rules prohibiting the manufacture, sale or distribution of one or more children's product containing an intentionally-added priority chemical if the board finds that:

- (1) Distribution of the children's product directly or indirectly exposes children and vulnerable populations to the priority chemical; and
- (2) One or more safer alternatives to the priority chemical are available at a comparable cost.

An alternative is "available at comparable cost" if it is offered for sale in the U.S. at a price that is affordable as demonstrated by the number of product units sold. In the case of an alternative that is technically feasible but not yet offered for sale in the U.S., "available at comparable cost" means capable of being produced and sold at a price that is not likely to be a barrier to purchase by users of the product. If several available and safer alternatives are identified, the rule may prohibit the sale of children's products that do not contain the safer alternative that is least toxic to human health or least harmful to the environment.

Rules adopted pursuant this section are major substantive rules as defined in 5 MRS §8071(2)(B) and therefore may be finally adopted by the board only after approval by the Legislature as provided under 5 MRS §8072. The final rule must specify the effective date of the sales prohibition, which may not be sooner than 12 months after notice of the proposed rule has been published by the Secretary of State as provided under 5 MRS §8053(5).

B. Assessment of alternatives; scope of review. In determining if safer alternatives to one or more specific uses of a priority chemical are available at a comparable cost, the board shall consider all relevant evidence to that effect including, but not limited to, alternatives assessments submitted by product manufacturers, alternatives assessments conducted by or on behalf of the department or other government agencies, and alternatives assessments conducted by non-governmental organizations and educational institutions.

(1) Availability. For the purpose of determining whether an alternative is available at comparable cost, the board shall consider all relevant evidence to that effect including but not limited to:

- (a) The extent to which the alternative currently is available in the marketplace;
- (b) The affordability of the alternative as demonstrated by sales volumes;
- (c) The purchase price differential between the product containing the priority chemical and the alternative; and
- (d) In the case of an alternative that is not already offered for sale, information bearing on the ease with which the alternative could be substituted for the use of the priority chemical and introduced into the U.S. market.

The board is not obligated to consider information related to the redesign, retooling or other costs incurred by a product manufacturer to discontinue the use of the priority chemical. The essential inquiry for the board is the cost to consumers to substitute a technically-feasible alternative.

(2) Safety. An alternative is safer if, when compared to a priority chemical that it could replace, the alternative has not been shown to pose the same or greater potential for harm to human health or the environment as the priority chemical. In determining if an alternative chemical is safer, the department, in consultation with the Maine CDC, shall consider all relevant evidence to that effect including but not limited to:

- (a) The propensity of the chemical to be released from the product during use;
- (b) The likelihood that children will be exposed to the chemical as a result of its use in the product and the predicted magnitude of that exposure;
- (c) The persistence of the chemical and its tendency to bio-accumulate;
- (d) The potential human health effects from exposure to the chemical; and
- (e) The eco-toxicity of the chemical.

If the department identifies several available safer alternatives to a priority chemical, the Maine CDC may, as resources allow, evaluate the alternatives to identify the alternative or alternatives least toxic to human health or least harmful to the environment.

(3) Presumptions. The board may, in the absence of persuasive evidence to the contrary:

- (a) Presume that an alternative is safer if the alternative does not contain a chemical of high concern;
- (b) Presume that an alternative is available if the alternative is sold in the United States;

(c) Presume that an alternative is both safer and available if:

- i. The product containing the priority chemical has been banned by another U.S. state; or
- ii. The product containing the priority chemical is an item of apparel or novelty.

C. Exemptions from sales prohibitions. The manufacturer or distributor of a children's product subject to a prohibition adopted under subsection A may apply for an exemption for one or more specific uses of the priority chemical by filing an application with the commissioner. The exemption application must, at a minimum:

- (1) Identify the specific product or products for which the exemption is sought;
- (2) Identify the alternatives considered for substitution of the priority chemical;
- (3) Explain the basis for concluding that substitution of the alternatives is not technically or economically feasible; and
- (4) Set forth the steps that have and will be taken to minimize the use of the priority chemical.

Department staff shall determine whether the application is complete for processing within 15 days after it is received by the department. If the application is determined to be incomplete, staff shall notify the applicant in writing and specify the additional information needed to make complete the application. The commissioner shall deny or grant an exemption request within 60 days after receipt of a complete application.

The commissioner may grant an exemption with or without conditions upon finding that there is a need for the product in which the priority chemical is used and there is no technically or economically feasible alternative to the use of the priority chemical in the product. An exemption may be granted for a term not to exceed 5 years and may be renewed for one or more additional 5-year terms upon written application demonstrating that a technically or economically feasible alternative remains unavailable.
